▼ Feasibility Study – Predicting Soccer Player Position from Attributes (FIFA 23)

▼ Define Project

🔗 Project Link

[Kaggle Dataset – FIFA 23 Complete Player Dataset](#)

📝 Project Summary

This project builds a supervised machine learning model to predict a soccer player's **primary position group** (Forward, Midfielder, Defender, or Goalkeeper) based on technical and physical attributes in the FIFA 23 dataset. This can help scouts and coaches make better data-informed decisions about lineup and player development.

📊 Data Description

The dataset includes over 19,000 players with 100+ features ranging from numerical stats (pace, dribbling, defending, etc.) to categorical info (team, nationality, preferred foot). We will clean, transform, and group this data for modeling.

🧠 Machine Learning Task

This is a **Supervised Multiclass Classification** problem with 4 target classes: FWD, MID, DEF, GK.

```

print("Path to dataset files:", path)

→ Path to dataset files: /root/.cache/kagglehub/datasets/stefanoleone992/fifa-23-complete-player-dataset/versions/1

dataset_path = "/root/.cache/kagglehub/datasets/stefanoleone992/fifa-23-complete-player-dataset/versions/1"
os.listdir(dataset_path)

→ ['male_players (legacy).csv',
    'female_players (legacy).csv',
    'female_teams.csv',
    'male_coaches.csv',
    'male_teams.csv',
    'male_players.csv',
    'female_coaches.csv',
    'female_players.csv']

```

📝 Dataset Scope and Justification

While the full FIFA 23 dataset includes both male and female players, we are using `male_players.csv` as our primary dataset for this feasibility study. This decision is based on the following reasons:

- ⚽ **Consistency in Features:** The male player dataset includes the most complete set of technical and physical attributes needed for position classification.
- 📊 **Sample Size:** It contains significantly more rows (player entries), which helps improve model training and generalization.
- 🌈 **Reduced Noise:** Mixing male and female datasets could introduce structural or statistical differences (e.g., league, competition level) that may complicate training a clean model without substantial preprocessing or normalization.

- 🔍 **Clearer Labeling:** Position data in the male dataset is more standardized and aligned with mainstream position groupings (FWD, MID, DEF, GK).

Female player data or coaches/team files may be used in future expansions, but for the initial model development and feasibility testing, focusing on `male_players.csv` ensures better feature quality and less data fragmentation.

✓ Data Loading and Initial Look

To begin assessing the data quality, we first load the FIFA 23 dataset and check the number of data points (rows) and features (columns).

```
# Load just the first 1000 rows to avoid RAM crash
df_sample = pd.read_csv(dataset_path + "/male_players.csv", nrows=1000)

# Show shape
print("Sample shape (rows, columns):", df_sample.shape)

df_sample.head()
```

	player_id	player_url	fifa_version	fifa_update	fifa_update_date	short_name	long_name	player_positions	overall
0	158023	/player/158023/lionel-messi/230009	23	9	2023-01-13	L. Messi	Lionel Andrés Messi Cuccittini	RW	91
1	165153	/player/165153/karim-benzema/230009	23	9	2023-01-13	K. Benzema	Karim Benzema	CF, ST	91
2	188545	/player/188545/robert-lewandowski/230009	23	9	2023-01-13	R. Lewandowski	Robert Lewandowski	ST	91
3	192985	/player/192985/kevin-de-bruyne/230009	23	9	2023-01-13	K. De Bruyne	Kevin De Bruyne	CM, CAM	91
4	231747	/player/231747/kylian-mbappe/230009	23	9	2023-01-13	K. Mbappé	Kylian Mbappé Lottin	ST, LW	91

5 rows × 110 columns

✓ Missing Values?

```
df_sample.isnull().sum()[df_sample.isnull().sum() > 0]
```

	0
value_eur	8
wage_eur	6
league_id	6
league_name	6
league_level	6
club_team_id	6
club_name	6
club_position	6

physic	120
goalkeeping_speed	880

dtype: int64

```
categorical_cols = df_sample.select_dtypes(include=['object']).columns.tolist()
numerical_cols = df_sample.select_dtypes(include=['number']).columns.tolist()

print("Categorical features:", len(categorical_cols))
print("Numerical features:", len(numerical_cols))
```

→ Categorical features: 47
Numerical features: 63

Feature Summary Table

Summary table that includes:

- Feature type (categorical or numerical)
- Value ranges or categories
- Missing value count
- Outlier check (for numerical columns)

```
# Helper function to detect outliers using IQR
def count_outliers(series):
    if pd.api.types.is_numeric_dtype(series):
        Q1 = series.quantile(0.25)
        Q3 = series.quantile(0.75)
        IQR = Q3 - Q1
        lower = Q1 - 1.5 * IQR
        upper = Q3 + 1.5 * IQR
        return ((series < lower) | (series > upper)).sum()
```

```

else:
    return np.nan # not applicable

# Build feature summary table
summary = []

for col in df_sample.columns:
    col_type = 'categorical' if col in categorical_cols else 'numerical'
    unique_vals = df_sample[col].unique()
    if col_type == 'categorical':
        val_summary = ", ".join(map(str, unique_vals[:5])) + ("..." if len(unique_vals) > 5 else ""))
    else:
        val_summary = f"{df_sample[col].min()} to {df_sample[col].max()}""

    summary.append({
        "Feature": col,
        "Type": col_type,
        "Values": val_summary,
        "Missing": df_sample[col].isnull().sum(),
        "Outliers": count_outliers(df_sample[col])
    })
}

feature_summary_df = pd.DataFrame(summary)

```

The summary table below gives us a quick overview of each feature in the sample dataset. It helps us detect data quality issues and guides how we treat different feature types in preprocessing.

```

import pandas as pd
import numpy as np
import matplotlib.pyplot as plt

import seaborn as sns
import warnings
warnings.filterwarnings("ignore")

# Display the summary table (first 20 rows)
feature_summary_df.head(20)

```

✓ Comparing Feature Distributions Across Classes

Visualizing how each feature varies across player positions (target classes) to identify which features might be useful for classification.

```
# Define target column (update this if your target is named differently)
target_col = 'player_positions'

# Select numerical features only
numerical_cols = feature_summary_df[feature_summary_df['Type'] == 'numerical']['Feature'].tolist()

# Plot histograms grouped by class

for col in numerical_cols:
    plt.figure(figsize=(8, 4))
    sns.histplot(data=df_sample, x=col, hue=target_col, element='step', stat='density', common_norm=False)
    plt.title(f'{col} by Player Position')
    plt.xlabel(col)
    plt.ylabel("Density")
    plt.tight_layout()
    plt.show()
```
